## RP278 – Ovarian X-Ray Protection for Female Patients

The development of the MAVIG ovarian protection is unrivalled and meets all requirements of a radiology practice. The radiation exposure to the gonads of female lying patients, for example during pelvic exams, is significantly lowered without hindering the diagnostic technique.

The two radiolucent control marks ensure correct and uncomplicated placement. In addition to the three available sizes, each shield can be positioned by means of two swiveling parts to allow for fine adjustment.

Of course, the RP278 is easy to clean and disinfect.

- **Protective Material**      Multilayer lead rubber
- **Lead Equivalent**        Pb 1.00 mm
- **Outer Cover/Colour**     Soft PVC cover in light grey
- **Sizes**
  - Large – Height 12 cm
