## RP280 – Testicle X-Ray Protection for Men/Boys

The penis and scrotum are protected allround with a lead equivalent of 1.00 mm Pb. The padded, elastic purse closure, pressed gently, ensures a secure and correct position throughout the examination. The rounded design means that there is no risk of injury to the patient.

Putting it on is simple and the skin-friendly lining of the MAVIG RP280 testicle capsules provides perfect hygiene inside and out. Cleaning and disinfection are easy. Naturally, radiation protection is a top priority in our product design, so by using the RP280 series you can guarantee your patients sound protection of the reproductive organs which meets all legal requirements.
